Gloop!

This week we have been exploring gloop. Cornflour and water creates a slime which acts like a solid. It is called a non-Newtonian fluid and is great to encourage children's exploration of texture and gives us lots to talk about. We have had hours of fun. Just mix cornflour with water to find out more!

Handy hints from the Pastoral Team.....

BREAKFAST

School mornings can be a bit of a rush – and fitting in healthy breakfast can sometimes be a challenge!! Breakfast is important to give your child a good start to the day.

If you have the option...set the table up the night before with cereal/bread/bowls and spoons. Things like scrambled egg and porridge can be microwaved to save a little bit of time.

If you need to have something more of a 'grab n go' brekkie then things like: *Toast, crumpets, yoghurts in the tubes, bananas even cheese cut into sticks.*

And pitta pockets are fab - you can put so many different things in and it's more contained, so less mess and no packaging.
